myclinic

myclinic is an integrated new generation healthcare management system. **myclinic** gives an international standard and accurate piece of mind operation structure for any clinic or hospital. The entire system when implemented gives an unmatched performance and leads you to a new era paperless atmosphere of medical practice and administration. The highlight of **myclinic** is its salient features of a single window operated electronic insurance claims management system.

- ▼ Customized medicine list for companies and cash patients
- ▼ Regular Software updates
- ▼ Integrated inventory and pharmacy management system
- ▼ Best after sales support
- ▶ And many more useful tools

Clever Design

myclinic presents a clear and easy user interface. Based on the feedbacks we have received from many users worldwide, our design is an up-to-date one that doctors will immediately be able to use without any extensive training to harness the power of each of the features.

We have simplified *myclinic* healthcare by incorporating only twelve main modules into the main screen.

Each module is itself part of a larger integrated “work-flow area”

The advantage of an integrated “work-flow” design is that you can view all relevant patient details at a single glance. This is especially important in busy areas such as the front desk. We have avoided the unnecessary popup screens that slows the user in performing his/her daily tasks. What this means to you is a faster processing time of patient’s information.

“ BEST SOFTWARE AT AFFORDABLE PRICE ”
